

Support Ashton Keynes!

Dear Supporter,

We're asking you to send a letter of support for Ashton Keynes Green Energy (the proposed biodigester near Ashton Keynes) to Wiltshire Council's Strategic Planning Committee. For more information, you can visit our website [here](#). We want members of the committee to know just how crucial an AD plant in this area can be for providing stable income to local farms to help them survive. Your support will make a real difference in getting these plans across the line!

Please remember to include our planning reference PL/2023/03359 in your letter.

These are the email addresses you need to send your letter to. Please copy and paste them all into **BCC** : ernie.clark@wiltshire.gov.uk; howard.greenman@wiltshire.gov.uk; nick.baker@wiltshire.gov.uk; sam.blackwell@wiltshire.gov.uk; chris.brautigam@wiltshire.gov.uk; kymee.cleasby@wiltshire.gov.uk; nick.holder@wiltshire.gov.uk; dominic.munns@wiltshire.gov.uk; christopher.newbury@wiltshire.gov.uk; stewart.palmen@wiltshire.gov.uk; nigel.white@wiltshire.gov.uk; rsheridan@quatro-pr.co.uk; rparry@quatro-pr.co.uk

This letter should be in your own words but here are some key points you could consider including:

Location

This plant is in the best location for local farmers. The majority of feedstock taken by Ashton Keynes Green Energy will come from a 15km radius. Farmers who put the food on your plates are going to be the ones who benefit.

Farming Benefits

The plans support local farmers and the rural economy at a time when things have never been harder. Ashton Keynes Green Energy will use organic materials from farmers to feed the plant and provide natural fertiliser in return to give farms the stability they need.

Homegrown Energy

The plans will produce green energy and support energy security. Biomethane produced will help our transition to net zero. This reduces our dependence on foreign gas supplies. The plant will also sequester CO2 which will addresses national shortages.

Thank you so much for your support!

Best wishes,

The Ashton Keynes Green Energy Engagement Team
